

IN THE CLAIMS:

Please amend the claims as follows:

1. (Canceled)
2. (Currently amended) The composition as in claim 1, A polymer-supported metal cluster composition comprising a transition metal and a cross-linked polymer, wherein the transition metal is supported by the cross-linked polymer and the cross-linked polymer is obtained by cross-linking a cross-linkable polymer wherein the cross-linkable polymer contains at least one hydrophobic side chain and at least one hydrophilic side chain, wherein at least one hydrophilic side chain has a cross-linkable functional group, and wherein each hydrophobic side chain is free of hydrophilic substituents and cross-linkable functional groups, and wherein the composition is prepared, in a solution, by forming a micelle wherein clusters of the metal are supported by the cross-linkable polymer and then cross-linking the cross-linkable polymer.
3. (Previously presented) The composition as in claim 2, wherein the cross-linkable polymer contains a hydrophobic side chain containing an aromatic group, and the micelle is formed by supporting a transition metal by the cross-linkable polymer using a ligand exchange reaction between a transition metal chelate and the aromatic group of the cross-linkable polymer.
4. (Previously presented) The composition as in claim 2, wherein the metal clusters are 20 nm or smaller in diameter.
5. (Currently amended) The composition as in claim [[1]]2, wherein the transition metal is at least one selected from the group consisting of palladium, cobalt, nickel, rhodium, ruthenium, iridium, gold and platinum.

6. (Currently amended) The composition as in claim [[1]]2, wherein the transition metal is at least one selected from the group consisting of palladium, ruthenium, iridium, gold and platinum.

7. (Currently amended) The composition as in claim [[1]]2, wherein the transition metal has zero valence.

8. (Currently amended) The composition as in claim [[1]]2, wherein the cross-linkable polymer contains a hydrophilic side chain having an epoxy group, a carboxyl group, an isocyanate group or a thioisocyanate group.

9. (Original) The composition as in claim 8, wherein the cross-linkable polymer further contains at least one type of a hydrophilic side chain having a hydroxyl group, a primary or secondary amino group, or a thiol group.

10. (Currently amended) The composition as in claim [[1]]2, wherein the cross-linkable polymer is: (i) a polymer or a copolymer obtained by polymerizing or copolymerizing at least one type of A1) monomer having an aromatic group as a hydrophobic side chain, a hydrophilic side chain having a cross-linkable functional group and a polymerizable double bond; or (ii) a copolymer obtained by copolymerizing at least two types of monomers selected from the group consisting of B1) monomer, B2) monomer, and B3) monomer, wherein the B1) monomer is a monomer having an aromatic group as a hydrophobic side chain, a hydrophilic side chain having a cross-linkable functional group and a polymerizable double bond, the B2) monomer is a monomer having an aromatic group as a hydrophobic side chain and a polymerizable double bond, and the B3) monomer is a monomer containing a hydrophilic side chain having a cross-linkable functional group and a polymerizable double bond.

11. (Previously presented) The composition as in claim 10, wherein the cross-linkable polymer is a copolymer obtained by copolymerizing at least two types of monomers selected from B1) monomer, B2) monomer, and B3) monomer, wherein the

B1) monomer is a monomer represented by chemical formula 1:

wherein R^1 is a hydrogen atom or an alkyl group having 1-6 carbon atom(s), R^2 is an aryl group having 6-14 carbon atoms, R^3 is a covalent bond, an alkylene group having 1-6 carbon atom(s), $-\text{R}^9(\text{OR}^{10})_m-$, $-\text{R}^9(\text{COOR}^{10})_n-$ or $\text{R}^9(\text{COOR}^{10})_o(\text{OR}^{10})_p-$,

wherein R^9 is independently a covalent bond or an alkylene group having 1-6 carbon atom(s), R^{10} is independently an alkylene group having 2-4 carbon atoms, m, n and p are integers of 1-10 and o is 1 or 2,

R^4 is a carboxyl group, an isocyanate group, an isothiocyanate group, a hydroxyl group, a primary or secondary amino group, a thiol group or a group represented by chemical formula 2:

or chemical formula 3:

wherein R^5 is independently an alkylene group having 1-6 carbon atom(s), R^6 and R^7 are each independently a hydrogen atom or an alkyl group having 1-6 carbon atom(s), and R^6 may form a 3-6 membered ring with R^5 or R^7 ,

the B2) monomer is a monomer represented by chemical formula 4:

wherein R^1 and R^2 are independently as defined above, R^{11} is a hydrogen atom or an alkyl group having 1-6 carbon atom(s),

and the B3) monomer is a monomer represented by chemical formula 5:

wherein R^1 , R^3 , R^4 and R^{11} are independently as defined above.

12. (Currently amended) A method for performing Use of the composition as in claim 1 for a catalyst in a hydrogenation reaction, a dehydrogenation reaction, an oxidation reaction, an allylic substitution reaction, a coupling reaction or a carbonylation reaction, wherein the method comprises catalyzing the reaction with a composition of claim 2.

13. (Currently amended) The composition as in claim 10, wherein the cross-linkable polymer is a polymer ~~or a copolymer~~ obtained by polymerizing ~~or copolymerizing~~ at least one type of A1) monomer represented by chemical formula 1:

wherein R^1 is a hydrogen atom or an alkyl group having 1-6 carbon atom(s), R^2 is an aryl group having 6-14 carbon atoms, R^3 is a covalent bond, an alkylene group having 1-6 carbon atom(s), $-\text{R}^9(\text{OR}^{10})_m$, $-\text{R}^9(\text{COOR}^{10})_n$ or $\text{R}^9(\text{COOR}^{10})_o(\text{OR}^{10})_p$,

wherein R^9 is independently a covalent bond or an alkylene group having 1-6 carbon atom(s), R^{10} is independently an alkylene group having 2-4 carbon atoms, m, n and p are integers of 1-10 and o is 1 or 2,

R^4 is a carboxyl group, an isocyanate group, an isothiocyanate group, a hydroxyl group, a primary or secondary amino group, a thiol group or a group represented by chemical formula 2:

or chemical formula 3:

wherein R^5 is independently an alkylene group having 1-6 carbon atom(s), R^6 and R^7 are each independently a hydrogen atom or an alkyl group having 1-6 carbon atom(s), and R^6 may form a 3-6 membered ring with R^5 or R^7 .
